An Elementary Guide to the State of the Art in the Quantum Information Field. Introduction to Quantum Physics and Information Processing guides beginners in understanding the current state of research in the novel, interdisciplinary area of quantum information. Suitable for undergraduate and beginning graduate students in physics, mathematics, or engineering, the book goes deep into issues of quantum theory without raising the technical level too much. The text begins with the basics of quantum mechanics required to understand how two-level systems are used as qubits. It goes on to demonstrate how quantum properties are leveraged in devising algorithms that are more efficient than their classical counterparts. It then explores more sophisticated notions that form the backbone of...

This volume constructs a post-humanist subject through philosophy, critical theory and literature. It tracks diverse developments of post-humanisms, from anti-humanism to post-structuralism and psychoanalysis, using micro-readings of literary narratives to situate post-humanist ideas and establish an interpretive praxis. Underlining the ethico-political strand, *Posthumanism: Politics of Subjectivity* demonstrates how to imagine a posthuman socio-political subject that renounces claims to species supremacy and anthropocentric privilege via the categories of animality, object, technology and ecology. The volume brings together lucid philosophical discussions on the nature of subjectivity with analyses of texts as diverse as Perumal Murugan's *Poonachi*, John Banville's *Eclipse* and *Shroud*, Ted Hughes's poetry, and...

In its early phase, Subaltern Studies dealt extensively with community and violence in the context of peasant uprisings. Once the problem of peasant involvement in the modern politics of the nation had been posed, complexities in that relationship began to emerge. A new dimension was introduced when the relationship between community gender and national politics came to be taken seriously. The present volume confronts the whole range of new issues raised by the relations between community gender and the politics of violence. One set of essays looks specifically at the question of 'women and nation', especially minorities. Qadir Ismail looks at the claims of Tamil nationalism in Sri Lanka from the standpoint of the Southern Tamil woman. Aamir Mufti looks at the familiar gendered figure of a...

Violence of Democracy tracks the rise of India's divisive politics through a close examination of decades-long interparty confrontations in Kannur district of Kerala. Drawing on ethnographic fieldwork amongst workers of political groups in the region and extensive archival research, Ruchi Chaturvedi investigates the unique character of the conflict between the parties on the political left and the right. This conflict, she shows, contradicts all explanations centring on religious, caste, class or ideological differences. It offers, instead, new ways of understanding how everyday interparty competition can produce vengeful political communities. Rival political parties mobilise practices of disbursing care and aggressive masculinity in their struggle for electoral and popular power, a process...

Right from 1948, when the Atomic Energy Commission was established, to the peaceful nuclear explosion in 1974, to Operation Shakti in 1998, when India went overtly nuclear, and then the Indo-US Civil Nuclear agreement in 2005, every step was arrived at after much debate and deliberation. Rejecting discriminatory treaties like the NPT, taking a firm stand on the nuclear deterrence theory and standing up to superpowers despite heavy sanctions paved the way for India's nuclear exceptionalism, thereby revealing not only the astounding brilliance and capability of the leaders and thinkers in the field but also India's strong...**

This book is a cultural history of western India from a fascinatingly new perspective: language use, writing practices, and relations of power. Its principal focus is the Modi script, a cursive form widely used for writing the Marathi language from the medieval era until quite recently. Examining the changing domains in which Modi flourished and declined over several centuries, Deshpande charts the interconnections of writing, script, language use, and structures of social and regional power in early-modern and modern South Asia. Positioning the career of this cursive form within a cluster of scripts, documents, and language practices, *Scripts of Power* tracks changing meanings within literate groups, bureaucratic power, and linguistic identity. It presents a critical genealogy of diverse...

Fourier analysis is a subject that was born in physics but grew up in mathematics. Now it is part of the standard repertoire for mathematicians, physicists and engineers. This diversity of interest is often overlooked, but in this much-loved book, Tom Körner provides a shop window for some of the ideas, techniques and elegant results of Fourier analysis, and for their applications. These range from number theory, numerical analysis, control theory and statistics, to earth science, astronomy and electrical engineering. The prerequisites are few; a reader with knowledge of second- or third-year undergraduate mathematics should have no difficulty following the text, and the style is lively and entertaining. This edition of Körner's 1989 text includes a foreword written by Professor Terence Tao introducing it to a new...

This book develops elementary classical mechanics in a setting that is appropriate for beginning university mathematics students without requiring a background in physics. It is an ideal first look at the subject for those who will go on to study more advanced aspects of the subject, such as Lagrangian, Hamiltonian, and quantum mechanics. These more advanced developments of mechanics are at the forefront of research in modern mathematics. Certainly, topics such as symplectic geometry, Lagrangian intersection theory, spectral theory, pseudodifferential operators, etc., do not require a background in classical mechanics, but studies in these areas are greatly enriched by a knowledge of their roots and how some of their motivational issues arose. This book consists of material for a one-term course in...

During the classical period, aesthetics was an inward-facing field, not concerned with the socioeconomic reality of everyday life. However, art has always flourished across societies as a direct product of the very realities of caste, class, and gender that aesthetics long ignored. As a result, aesthetics as a keyword in the humanities stands at a crossroads today. Eschewing definitions, this volume attempts to explore what aesthetics can be, to deploy the dissipation of classical aesthetics into a reconstituted toolkit of critical terms: anger, shock, beauty, form, praxis, and affect. The authors signal that aesthetics is to be treated less as a body of knowledge and more as an approach or a method that is both ahistorical and comparatist. Aesthetics can be broadly defined as a reflexive and...

Most amateurs possess erroneous thinking processes that remain with them throughout their chess lives. These flaws in their mental armour result in stinging defeats and painful reversals. Books can be bought and studied, lessons can be taken - but in the end, these elusive problems always prove to be extremely difficult to eradicate. Seeking a solution to this dilemma, the author wrote down the thoughts of his students while they played actual games, analysed them, and catalogued the most common misconceptions that arose. Indigenous Imaginaries argues for a redefinition of humanities from a comparative perspective anchored in the regional literary traditions of India. These indigenous traditions have negotiated hegemonic structures of power over centuries through creative engagements with differences and dogmas. The central argument here concerns the need to reconfigure epistemologies that do not accommodate the compulsions of creativity and critical reflection in a multilingual society. Translation functions throughout this volume as the telos of a dialogic, interdisciplinary mode of cognition that questions the exclusivist claims of Eurocentric formulations of the literary. It argues that the act of reading becomes an act of recovery when prescriptive protocols and absolutist dictums are subverted...

This book contains relatively unknown writings by Kosambi, including several obscure but important essays and an unpublished children's story. Also made available here for the first time are some wonderful letters that Kosambi wrote to, among others, the scientist Homi Bhabha and the writer-historian Robert Graves.
