People who discuss digital transformation often focus on new technology with a presumption that the working population will embrace it enthusiastically. But human beings are still instinctively dominated by fear, a single complicating reflex that will always be the default response. Workplace fear comes in many forms, including the fear of change, the fear of looking stupid, and the fear of working relationships, and in all cases, these fears have deep roots that extend far beyond having to learn new technology. It's about the fear of losing a job, a livelihood, and an identity. The results of such fear can have enormous repercussions on an organization, including increased vulnerability to ransomware and cyberattacks, increased employee turnover, loss of competitiveness, loss of market...

Drawing from major traditions in social thought, and academic media analysis, Stones provides the conceptual tools for audiences to bring greater sophistication to their interpretations, developing their capacity to think across items and genres.
